The HISTORY of the invention of the first steam engine is given in the following pages. It is a story of the progress of the human mind in the application of the principles of mechanics to the production of power. The first steam engine was invented by Thomas Savery in 1697. It was a simple device which used the expansion of steam to raise water from a lower level to a higher one. The next great step was made by James Watt in 1769. He invented the parallel motion linkage, which allowed the piston to move in a straight line. This was a great improvement on Savery's engine. The next great step was made by James Watt in 1776. He invented the separate condenser, which allowed the steam to be condensed in a separate chamber, thus saving a great deal of fuel. The next great step was made by James Watt in 1781. He invented the parallel motion linkage, which allowed the piston to move in a straight line. This was a great improvement on Savery's engine. The next great step was made by James Watt in 1781. He invented the parallel motion linkage, which allowed the piston to move in a straight line. This was a great improvement on Savery's engine.

An open book is shown, with the right page containing several small, dark, square images arranged in a grid. The text on the page is mostly illegible due to the image quality. The left page is mostly blank. The book is held open by red fabric covers.

Harmers International, Inc.

Harmers International, Inc.

A blurry photograph of a document or envelope. The document is light-colored and has a red wax seal on the right side. A postage stamp is visible in the upper right corner of the document. The background is dark. The text "Harmers International, Inc." is overlaid in the bottom left corner.

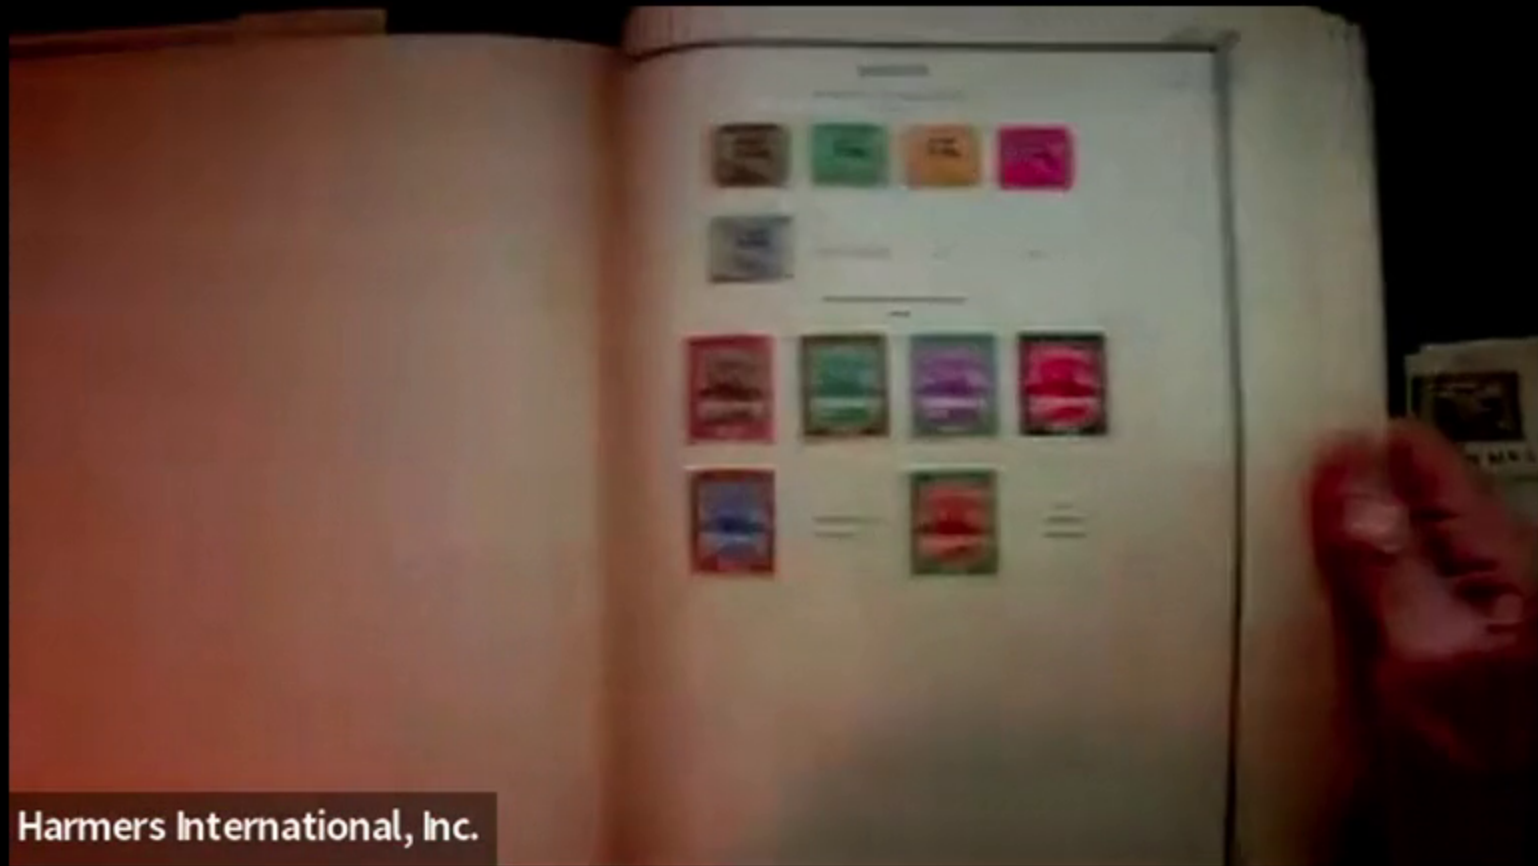

Harmers International, Inc.

Harmers International, Inc.

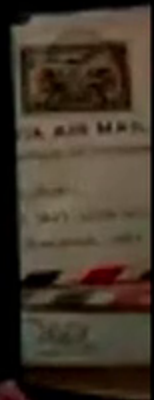

An open album is shown against a black background. The left page is blank. The right page features a sheet of six postage stamps arranged in two rows of three. The stamps are of various colors and designs. Below the stamps is a small rectangular label with illegible text. A human nose is positioned at the bottom center of the frame, appearing to be placed on the album page. To the right of the album, a portion of a white envelope with a postage stamp and the words "AIR MAIL" is visible.

Canada Geese in Flight

In the air, so often to be seen in Canada, the geese are a beautiful sight. In many instances they migrate through the air above the water, which was shown in this stamp, which was placed on sale October 20, 1963.

From the earliest times, Canada has been a trading nation. The development of the country into a modern, free port, because of its strategic position in the far north, has made possible the introduction of export goods to Canada.
